

Using fixed power supplies – Part 3 – Variable PSU

The Decal

My website host (WIX) does not allow .vsd files to be uploaded so I zipped the Visio file before uploading it.

I use Signomatic (<https://www.signomatic.ie/>) to get my decals made.

The file contains:

- a pdf and jpg of the back panel layout that I used as the template for drilling the panel;
- a pdf and jpg of the front panel design that I sent to Signomatic to turn into a decal; and
- a vsd (Microsoft Visio) file with four sheets showing how I got to the final product for both the front and back panels..

I have no financial interest in Signomatic.

I hope this helps you.

Samuel
